Cast Cookware

Since we aspire to be recognized as leading and innovative cookware producers, ZENOUKI GROUP introduced MASTER to the market in January 2019.

We believe that our customers' satisfaction is our main goal and are always eager to use the latest technology in our production in order to produce the best quality.

Utilizes the quality management system and good manufacturing practice GMP standard as the base to carry forward the full process of standardized production. We have built the complete quality management organization which covers the functional departments such as quality assurance QA, statistical quality control SQE, incoming quality control IQC, in process quality control IPQC, final quality control FQC and lab test.

What Makes MASTER Special?

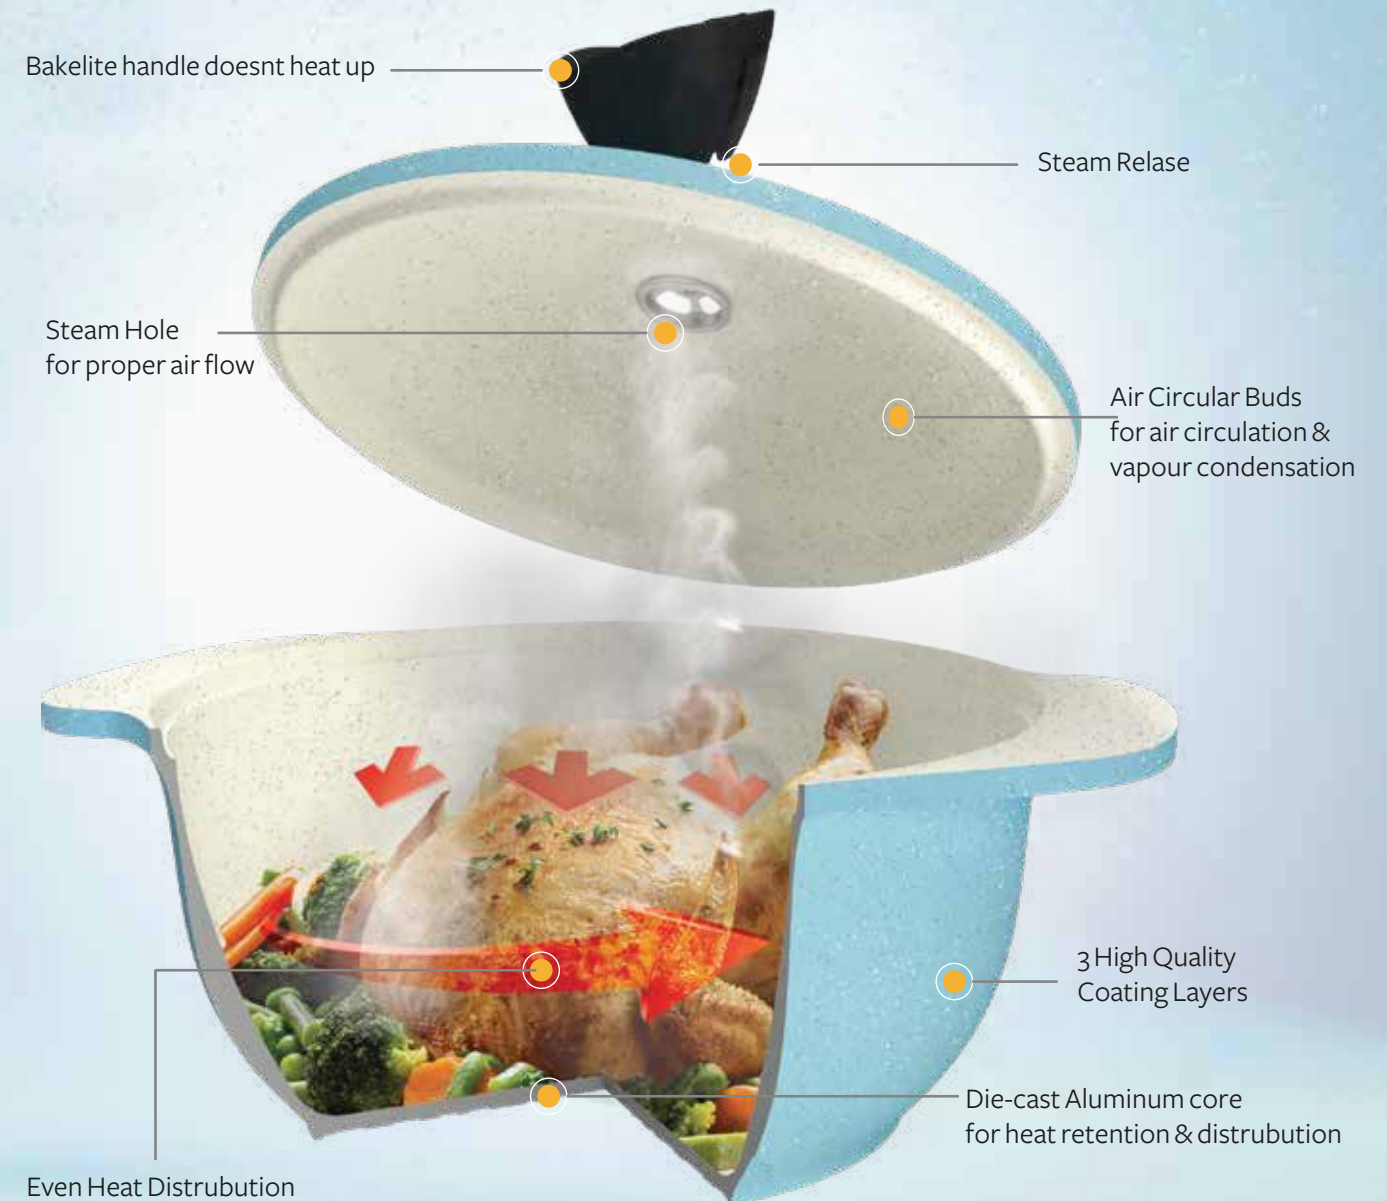

MASTER is specialized in producing die-casted aluminum cookware using the latest technology in this field by using three high quality coating layers.

MASTER products' lids have a highly efficient air circulation system to ensure a homogeneous airflow which guarantees that the food would be optimally heated and saves energy. A steam hole is integrated in the lid's knobs which is hidden inside the lid for proper airflow.

The product's base is produced to be safe with different stoves and it is designed to guarantee an effective heat distribution.

MASTER products' rims are designed with efficient pouring lips for easily pouring liquids.

All the coatings used in MASTER are PFOA free to guarantee a healthy life style.
